

Lenssen and Christiaens are building on an even stronger future together

At the end of the eighties, Mart Lenssen started his company LVS (Lenssen Vul- en Sluittechniek). Together with his wife Jose, son William and his team of specialists, the company has grown into a leading player in the international market of filling and closing machines. In the nineties Lenssen founded another company LTC (Lenssen Trading Company). This sister company is engaged in purchasing and selling of used machinery. This company is working very closely with LVS. In the context of sustainability, there is the possibility to provide the used machines with a second life by LVS. So customers can use these machines for many more years.

Christiaens Agro Systems has been active in machinery since the early sixties. Christiaens is specialized in the development and production of machines for the processing of elongated vegetables such as asparagus, leeks, spring onions and (mini) cucumbers. These machines are used by small growers till industrial processors all over the world.

Angelique Christiaens is the third generation in the family business Christiaens Agro Systems. The company was standing at a crossroad: Are we going to renovate the current location or are we growing and moving. Mart Lenssen on the other hand, was looking for the possibilities of selling his company LVS. After extensive consultation, it's been decided that Angelique Christiaens will take over the shares of LVS on 1 January 2022.

At the first sight there are not many similarities between the companies. But both family businesses have similar core values. Both are producing machines that are reliable, sustainable and having a very long lifetime. The goal is to find solutions in innovative techniques which can improve the customers efficiency.

Both LVS and Christiaens Agro Systems have a good reputation in the market and will continue to operate separately in their own existing markets. The collaboration with LTC will continue. Mart Lenssen, with all his knowledge and skills, will also remain available for LVS in the coming years. In order to further optimize the internal synergy, the possibilities of a new location are being explored.
